

and quickly determine its relevance to their specific work.

Peer-Reviewed Journals from Leading Publishers Added

ProQuest is collaborating with Emerald Group Publishing Limited, the world's leading publisher of management research, to offer deep indexing for 68 Emerald journals through CSA Illustrata.

This is in addition to thousands of international journals from hundreds of leading publishers such as Cambridge University Press, Elsevier, Oxford University Press, Springer, and more-- including recently-signed Smithers Rapra Technology Limited, for four leading plastics and rubber science journals.

Library Journal Webinar Now Available

If you didn't have the opportunity to attend the live webinar in May, we encourage you to take just a few minutes now to watch the recording [Deep Indexing--A New Approach to Searching Scholarly Literature](#).

Hear the panel of scholars, librarians, and faculty as they discuss how deep indexing--found in CSA Illustrata: Natural Sciences and now in CSA Illustrata: Technology--is transforming research and maximizes journal subscriptions with linking to the full-text articles.

New! "Telling the CSA Illustrata Story" and Other Tools that Maximize Your Subscription

CSA Illustrata's seamless navigation enhances research and teaching by locating the most relevant results across a variety of subject areas virtually effortless.

What People Are Saying About CSA Illustrata

In a recent review from *The Charleston Advisor*, Meris A. Mandernach and Jody Condit Fagan of Carrier Library at Virginia's James Madison University said that "including graphical results with text citations is of valuable assistance in simply understanding the quality and nature of results." Later in the review, they added that some of the faculty at James Madison University had been trying to get their students to understand how to present data effectively in visual components, and for them, "Illustrata epitomizes why doing so is important and valuable for researchers."

"With traditional databases, you never know what figures and tables you're going to get. Until you look the article up, you don't know what it's going to have." -- Dr. Samuel Flaxman, Post-Doctoral Researcher, Princeton University

"It's much easier to find the information; it's much, much better." -- Dr. Marco Columbini, Professor of Biology, University of Maryland

"I waste a lot of time looking through papers which look like they contain some data, but they don't ... I definitely see this database as a significant improvement." -- Dr. Maria Prokopenko, Geochemist, Princeton University

"...Highly recommended. Lower-level undergraduates through faculty/researchers." -- M. Burreight, *CHOICE*, August 2007
